
Analyst
Web UI
API and jobs
granite_core
Language model
Choose a task, set the fault
an example, or own text
Check the form, send the run
POST /api/runs
Validate, store run, queue job
answers 202 at once
Execute the five steps
run_workflow, record reads
Answer three prompts
live, or recorded answers
Check, detect, rank
evaluate_checks, attribute
Store trace, results, finding,
hypotheses and evidence
Show graph, checks, finding
poll the job, load the run
Two things run without the analyst
Steps in the green and blue lanes happen in a background job;
the UI only polls. The model is reached from granite_core alone,
never from the UI or the routes.
Finding opened?
no
Clean run: nothing to investigate
all outcome checks passed
yes
Press Verify on a hypothesis
choose N replays, M controls
Check state and repair rule,
queue the experiment
Replay N with fix, M without
run_experiment
Answer replay prompts
only the re-executed steps
Decide by rule VR-1
counts, Wilson interval
Store replays, verdict,
evidence, new status
Show the verdict and replays
progress shown while running
Accept, reject or ask
the comment rule applies
Record review and audit entry
apply_review, lifecycle
Show status, offer the report
