open question
failure outcome
good outcome
Analyst submits a task (optionally with a fault)
Validate the task input
message, e-mail, order id; no unknown keys
Input valid?
no
Refused with field errors
HTTP 422; nothing is stored
yes
Run the five workflow steps
record inputs, outputs and declared reads
Run completed?
no
Open finding: explicit error
the run stopped at a step
yes
Evaluate the checks
2 outcome checks, 5 step contracts
Outcome check failed?
no
Clean run: no finding
nothing to investigate
yes
Open finding: silent failure
detected, not yet explained · level V0
Rank where it began
provenance first, structure as fallback · V1
Replay defined for the step?
no
Evidence-supported
no automatic replay; judge the evidence
yes
Replay N times with the fix, M without
controls show it was the fix, not luck
Origin confirmed?
refuted · inconclusive · error
Try the next hypothesis
or run more replays
confirmed · V2
Human review
accept · reject · ask for more information
Accepted?
no
Rejected: closed with a reason
comment is mandatory
yes
Resolve, or close without fixing
confirmed by a person · level V3
Report with hashed evidence (Markdown, JSON)
