restart or deploy
deploy from render.yaml: a manual step that has not been done yet
Legend
running Granite process
build artefact
data at rest
optional service
prepared, not deployed
planned connection
Honest status (2026-10-11)
Left and middle are verified: the laptop run was exercised in a browser and by the smoke test, and
CI built the image and ran the smoke test inside it. The right side is only prepared: nobody has
created the Render service, so there is no public URL yet.
