note
Ground truth, kept apart
Recorded beside the trace for scoring.
attribute() never receives it (a test
checks its signature).
checks *
has its own trace
CheckDef
id, name: str
type: assert|truth|policy|...
scope: outcome|step
step: str
expression: str (DSL)
tolerance, severity, version
yields
CheckResult
check_id, check_version
scope, step, type, severity
status: PASS|FAIL|ABSTAIN|ERROR
observed, expected
computation: dict
blames (step_id)
ReplayRecord
kind: intervention|control
index, seed: int
completed: bool
trace: TraceV1
results: list[CheckResult]
judgement: ReplayJudgement
ExperimentSummary
rule_version: VR-1
