
Investigate a workflow run
granite_api.routes (HTTP entry points)
↓ task, fault, seed, mode
↑ RunOutcome (trace)
↓ trace, workflow checks
↑ findings, hypotheses
↓ trace, step, N, M
↑ verdict, replays
↓ decision, comment
↑ new status
↓ finding id
↑ Markdown or JSON
1 Execute run
services/runs.py: run_job
validate task
registry.validate_task
choose model source
llm_factory.build_provider
run workflow
runner.run_workflow
record steps and reads
runner._execute_steps
2 Analyse run
services/analysis.py: persist_outcome
evaluate checks
checks.evaluate_checks → dsl
open findings
checks.derive_findings
rank origins
attribution.attribute
hash evidence
evidence.make_evidence
3 Verify hypothesis
services/experiments.py: experiment_job
build the fix
verification.build_intervention
plan the replay
verification.plan_replay
replay and judge
experiment.run_experiment
decide the verdict
verification.decide (VR-1)
4 Review finding
services/reviews.py: apply_review
check comment rule
reviews.apply_review
change status
lifecycle.transition
write audit and note
common.audit · add_evidence
5 Report
services/report.py: finding_report
collect records
models: Finding, Evidence
render
report.finding_report
Module belongs to
application module
granite_core module
Reading the chart
Lines mean 'calls'. ↓ is data passed down,
↑ is data returned. Order is left to right.
